

WE'RE BANKING ON DIRTY ENERGY

CHASE 

BANKROLLING AN AMERICAN TRAGEDY

Destroying Appalachian Mountains for Dirty Energy

You wouldn't believe this is happening in America. One of the biggest environmental disasters in recent history is happening in our own country, and your bank is funding it—to the tune of hundreds of millions of dollars.

Chase is the largest financier of mountaintop removal coal mining, which literally involves blowing the tops off of historic Appalachian Mountains and poisoning drinking water to extract small amounts of dirty coal.

High Cost of Cheap Coal

Mountaintop removal, which provides a mere 7 percent of the nation's coal, is done by clear-cutting forests, blowing the tops off of mountains, and then dumping the debris into streambeds. In the process, mountaintop removal poisons essential drinking water supplies and pollutes the air with coal and rock dust—an undeniably catastrophic reality for the people of Appalachia.

BANKING ON A CLEAN ENERGY FUTURE

As the administration begins to set the country on a renewable energy path, Chase should put their money on the right side of history. To continue funding mountaintop removal coal and other risky coal projects means that Chase is undermining our nation's economic recovery and standing in the way of our clean energy future.

It's time for Chase to make millions by making history as a clean energy leader.

Help stop the brutal, toxic and irreversibly destructive practice of destroying mountains for climate-killing coal.
