Unilever Response to RAN's Notification of Publication of Indicative Forest Footprint Evaluation for North and East Kalimantan

Thank you for the opportunity to provide Rainforest Action Network (RAN) an update on actions Unilever is taking with regards to disclosing its Forest Footprint.

Please find attached a report that serves as a pilot of our implementation of the forest footprint work. We are planning to publish this report on Unilever's website this week. Our initial focus, as previously communicated to RAN, is on Aceh, Indonesia.

In line with our commitment to the landscape local engagement and monitoring programs with our suppliers and partners (such as the IDH Sustainable Trade Initiative, the RADD consortium, and Forum Konservasi Leuser), the Aceh province has been our focus. In the current report, we seek to understand the forest and peatland risks, as well as the rights of indigenous and local communities impacted by the development of palm oil through partnerships we are developing with organizations like Google Earth Engine, EarthQualizer, Descartes Lab, and Orbital Insights, among others.

Our current sustainable sourcing and digital workstreams enables us to create similar Forest Footprint Reports for areas such as North Kalimantan and East Kalimantan that we use for our sourcing strategies and impact programs. Please find attached some high-level analysis that we have done on these provinces, including Central Kalimantan, where we have been engaging since 2016 on a landscape program with the local government of Seruyan and Kotawaringin Barat districts through our collaboration with Yayasan Inobu. More information about this program can be found here: <https://inobu.org/the-mosaik-initiative>

Unilever is committed to creating a supply chain that is deforestation-free, peat conversion-free, and that respects the rights of Indigenous Peoples and communities. We will take the steps necessary to better understand our forest footprint and risks within our supply chain.
